Expanse Networks was formed in June 2000 to provide targeted television advertising solutions to leading VSPs (Video Service Providers). VSPs include cable television, satellite and VDSL (Very high bit-rate Digital Subscriber Line) system operators.

Late in 1999, we identified a significant opportunity for television advertisers to target audiences using existing cable and VDSL video delivery infrastructures. With a system design in hand and a dozen pending patents, Expanse negotiated a multi-year development contract with **Next Level Communications (NLC)** to apply Expanse technology to VDSL networks.

Early in 2000, an "angel" group of investors backed the concept with a \$580,000 round.

In June of 2000, three important events transpired:

- Expanse Networks, Inc. was formed,
- Video and telecommunications equipment supplier Next Level Communications became a strategic partner and invested \$3 million,
- Herb Lustig, an executive with extensive cable and telecommunications industry experience, joined as President and CEO.

With NLC's investment, Expanse completed the development of ExpanseTV™—a comprehensive software and system level solution that supports targeted advertising on a broad array of television delivery platforms. The design philosophy of ExpanseTV is to not only provide targeting technology but, more importantly, to offer a familiar interface that advertisers, media planners, and media buyers can use to make detailed audience selections for targeted ads. This "total system" approach is the key to delivering an exceptional product that adds value across the entire advertising chain.

Precision. Technology. Reach.<sup>TM</sup>[About Us](#)   [ExpanseTV](#)   [News](#)   [Contact Us](#)   [Employment](#)**What We Do**[Company History](#)**Management**[Charles Elderding, Ph.D.](#)[Herb Lustig](#)

## Charles Elderding, Ph.D.

Charles Elderding, Chairman and Chief Technology Officer of Expanse Networks, has more than 19 years of experience in the electronics, telecommunications, and optics industries. As a recognized expert in the field of telecommunications network architecture, he was one of the first to determine the economics and feasibility of the widespread deployment of high-speed two-way communications over hybrid fiber/coax (cable TV) networks.

While with Alcatel in Europe, he was a member of the development team for a Fiber-to-the-Curb (FTTC) telecommunications system that is now deployed worldwide. He then worked on Hybrid Fiber Coaxial (HFC) and Fiber-to-the-Curb transmission systems at General Instrument Corporation and at Next Level Communications. Prior to his career in industry, Dr. Elderding was a researcher at the U.S. Air Force Rome Air Development Center and at the University of California.

He earned a B.S. in Physics from Carnegie Mellon University, an M.S. in Solid State Science and Technology from Syracuse University, and a Ph.D. in Electrical Engineering from the University of California at Davis.

Dr. Elderding, a registered U.S. Patent Agent, has more than 30 patented or patent pending inventions and over 40 publications in the fields of engineering, physics and law. Dr. Elderding is also a Senior Fellow at the Progress & Freedom Foundation, a Washington D.C. based nonprofit, nonpartisan idea center that studies the impact of the digital revolution and its implications for public policy. He has appeared on C-SPAN as a commentator and panel participant on the topic of telecommunications deregulation.

Dr. Elderding also managed the creation of a complete intellectual property portfolio for Next Level Communications, a provider of fiber based telecommunications equipment to a wide range of telephone companies both in the U.S. and overseas. The work included co-inventing a Residential Gateway, a device that feeds video to multiple televisions in the residence from a single digital input stream, thus eliminating the need for multiple digital television set-tops in a subscriber's home. In 1998, US West placed an order for Residential Gateways from Next Level Communications, with a plan to deploy several hundred thousand units. Today, more than 35,000 units are already installed with more than 23 carriers.

In 1998, inspired by the success of IP-based firms such as Qualcomm, Rambus, Gemstar and others, Dr. Elderding founded **Telecom Partners Ltd. (TPL)**, to capitalize on intellectual property opportunities in the telecom and Internet sectors. Leveraging on an extensive background in telecommunications systems engineering and IP development and management, Dr. Elderding built a company to create intellectual capital portfolios for subsequent commercialization or sale.
